This sequence represents the heavy chain variable region of the human anti-HIV-1 gp120 monoclonal antibody 447-D. The antibody is targeted to an epitope on the V3 loop of gp120. The invention relates to the generation of heterohybridomas producing human monoclonal antibodies
                                                                                                                                                                                                                                       23-APR-1992;

The genes (Q78939-79002) were v6;Y24; 3-31; M84; M118 and M131, by PCR amplification using primers (Q78917-38. The genes are subdivided into 5 families of Vh genes. The high molecular weight DNA from human placenta. The DNA was partially gel electophoresis and 35-45 kb fraction swere collected. The fragments were in vitro packed and infected into 5 families of Wh genes. The products were in vitro packed and infected in the DNA fragments were sparated by the electophoresis and 35-45 kb fractions were collected. The fragments products were in vitro packed and infected into E.coli 490A. The DNA fragments were then subcloned by colony hybridisation. The Vh genes and immunoglobulin in mammalian hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Y07484;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
   The present invention describes pure zonulin which has an apparent CC molecular weight of 47 kD, as determined by SDS-PAGE, which is CC recognised by both anti-tau polycional antibody and by anti-zonula CC occludens toxin (20T) polycional antibody, and is capable of reversibly CC opening mammalian tight junctions. Zonulin proteins function as CC physiological modulators of mammalian tight junctions. They can be used CC for enhancing the absorption of therapeutic agents across tight CC junctions of intestinal and nasal mucosa and across tight junctions of the blood brain barrier. Zonulin can be used with agents such as drugs, CC e.g. lidocaine, adenosine, dobutamine, dopamine, epinephrine, cc correpinephrine, phentolamine, doxapram, alfentanil, dezocin, nalbuphine, CC uncrepinephrine, naloxone, ketorolac, midazolam, propofol, metacurine, CC uncristine, vinblastine, methicillin, mezlocillin, piperacillin, CC cetoxitin, cefenicid, cefmetazole and aztreonam, a hormone e.g. CC testosterone, nandrolene, menotropins, insulin, urofolltropin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                   The present sequence is that of the N-terminal region of adult human intestinal zonulin. The N-terminal sequences of human adult and foetal zonulins (see Y79130-36) were compared with vibrio cholera zonula occludens toxin (ZOT) to identify a common motif thought to be involved in receptor binding. Peptide antagonists (see Y79105-29) based on this motif are useful as antiinflammatory agents for treatment of gastrointestinal inflammation, and for treatment of conditions associated with breakdown of the blood-brain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               interferon-alpha, interferon-beta, interferon-gamma, interleukin-1 (IL-1), IL-2, IL-4, IL-8, polyvalent IgG, specific IgG, IgA, or IgM. The proteins can also be used for the production of antibodies which can be used to assay for zonulin in body tissue or fluids, or in affinity-purification of zonulin. The present sequence represents a zonulin
                                                                                                                                                                                 New peptide antagonist of zonulin useful as antiinflammatory agent treating cerebral ischemia, stroke, cerebral edema, gastritis, shigellosis, viral gastroenteritis, meningitis, encephalomyelitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Zonulin; antagonist; zonula occludens toxin receptor; human; blood-brain barrier; antiinflammatory; gastrointestinal inflammation; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   05-JUN-2000

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                            Matches
                                                                                                                                                        Query Match
                                                                                                                                                                                                                                  This sequence represents a fragment of the IgG heavy chain. This sequence was isolated using the biomedical device of the invention, which comprises: (a) a biocompatible support; and (b) conglution, which is covalently bound to the support. The device can be used for removing immune complexes (IC) from a fluid. This can be used for treating a mammal or for evaluating the status of a mammal. It can be used for treating diseases such as serum sickness, chronic immune complex nephritis, bacterial infections, viral infections, parasitic diseases, autoimmune diseases or neoplastic diseases. The devices can also be used for purification of IC and to study immune pathogenesis and antigens associated with a disease state. The covalently immobilised conglutinin can capture IC with high capacity and specificity and allows elution under mild conditions. The devices are stable with no loss of IC binding

                                                                                                                   Ş
                                                                                                                                                                                                                                            This represents a human immunoglobulin G (IgG) derived peptide sequence that has a stimulating effect on the fibrinolytic activity of the scuPA/CC suPAR complex of the invention. This sequence has similarity to the human IG heavy chain, IG V-III region (HV3T). The invention provides a CC thrombolytic therapeutic composition for the treatment and prevention of a thromboembolic disorder associated with the formation of fibrin clots. CC The composition comprises, as the active ingredient, a complex of a CC single chain urokinase type plasminogen activator (scuPA) and a soluble CC urokinase plasminogen activator receptor (suPAR). The complex (scuPA/CC suPAR) has thrombolytic activity under physiological conditions and in CC the presence of IgG, or of at least 1 IgG-derived peptide, and induces CC the presence of fibrin clots. The compositions and complex are useful CC the presence of fibrin clots. The compositions and complex are useful CC with the formation of fibrin clots, especially myocardial infractions, CC cerebro-vascular events, pulmonary embolism and deep vein thrombosis.
                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                           the formation of fibrin clots. The composition comprises, as the active ingredient, a complex of a single chain urokinase type plasminogen activator (scuPA) and a soluble urokinase plasminogen activator receptor (suPAR). The complex (scuPA/suPAR) has thrombolytic activity under physiological conditions and in the presence of IgG, or of at least 1 IgG-derived peptide, and induces fibrinolysis of fibrin clots. The compositions and complex are useful for the treatment or prevention of thromboembolic disorders associated with the formation of fibrin clots, especially myocardial infractions, cerebro-vascular events, pulmonary embolism and deep vein thrombosis.
Human adult heart zonulin N-terminal peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This represents a peptide sequence from the human immunoglobulin G (IGG) heavy chain, IG V-III region (HV3T). An IGG derived peptide sequence having similarity to this sequence has a stimulating effect of the fibrinolytic activity of the scuPA/suPAR complex of the invention. The invention provides a thrombolytic therapeutic composition for the treatment and prevention of a thromboembolic disorder associated with the treatment and prevention of a thromboembolic disorder associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New compositions with thrombolytic activity for, e.g. treatment of thromboembolism - comprise complex of single chain urokinase type plasminogen activator, scuPA, and soluble urokinase plasminogen activator scuPAR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   single chain urokinase type plasminogen activator; thromboembolism; scuPA; suPAR; IgG; regulator; fibrinolytic activity; fibrin clot; myocardial infraction; cerebro-vascular event; pulmonary embolism; deep vein thrombosis; immunoglobulin; human.

CC recognised by both anti-tau polycional antibody and is capable of reversibly co-coludens toxin (207) polycional antibody, and is capable of reversibly co-pening mammalian tight junctions. Zonulin proteins function as co-coludens toxin (207) polycional antibody, and is capable of reversibly co-pening mammalian tight junctions. They can be used co-colleged the bloody and modulators of mammalian tight junctions. They can be used co-colleged the blood brain barrier. Zonulin can be used with agents such as drugs, co-colleged the blood brain barrier. Zonulin can be used with agents such as drugs, co-colleged the blood brain barrier. Zonulin can be used with agents such as drugs, co-colleged the proportion, phentolamine, doxapram, alfentanil, dezocin, nalbuphine, co-colleged the proportion, nalouphine, co-colleged the proportion, succinylcholine, cytarabine, mitomycin doxorubicin, co-colleged the proportion, methicilin, mezlocillin, piperacillin, co-colleged the colleged to assay for zonulin in body tissue or fluids, or in affinity-colleged to assay for zonulin in body tissue or fluids, or in affinity-contention of zonulin. The present sequence represents an N-terminal contention of zonulin. The present sequence represents an N-terminal contention of zonulin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 2; Page 45; 64pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New purified zonulin - which is capable of reversibly opening mammalian tight junctions, used for enhancing the delivery of across intestinal and nasal mucosa and blood brain barrier
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Zonulin; mammalian tight junction; zonula occludens toxin; ZOT; Vibrio cholerae; vaccine; cholera toxin; polyclonal antibody; intestinal mucosa; nasal mucosa; blood brain barrier.

The inflammatory or allergic disease or disorder is selected from asthma, poorlassis, eczematous dermatitis, multiple sclerosis inflammatory bowal disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents the N-terminal of a human zonulin polypeptide. The specification describes a method of suppressing antigen presenting cell (APC)-mediated lymphocyte proliferation in a mammalian host pre-exposed to a particular antigen. The method comprises administering to the host an effective amount of a zot-related immunoregulator selected from Zot (zonula occludens toxin) or zonulin, the amount effective to down-regulate the activity of the APC. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Suppression of antigen presenting cell mediated lymphocyte proliferation, by administering a Zot-related immunoregulator useful for treating immune-related disorders, immune system rejection subsequent to tissue or organ transplantation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2000-271257/23

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            can be used in gene therapy. The colon cancer antigen polynucleotides, proteins and antibodies to the proteins are useful for the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The polynucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, gastrointestinal disorders, wounds, renal disorders, infectious diseases, and cardiovascular disorders. C98764 to C98772 and B54007 represent sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cc sequences, corresponding to human secreted proteins. Y64651 to Y65438 cc represent the EST-related proteins corresponding to Z4265 to Z43052. cc rhey can be used for producing secreted human gene products. cc rhey can be used for producing secreted human gene products. cc and upstream regulatory regions which control the location, development cc stage, rate, and quantity of protein synthesis, as well as stability of cc mRNA. The ESTs are also useful as probes for chromosome mapping, and to obtain full length cDNA clones. The ESTs can also be used in forensic procedures to identify individuals, or in diagnostic procedures to gene expression. The products may also be used in gene therapy protocols. The nucleic acids encoding signal peptides can be used for directing cc extracellular secretion of a polypeptide or the insertion of a cc polypeptide into a membrane, or importing a polypeptide into a cell. cc The proteins encoded by the EST sequences may be useful in treating a cc variety of human conditions. Secreted proteins have therapeutic value, cc and the identification of new secreted proteins is valuable. 242249 to cc exemplification of the present invention.

The Abs are prepared by grafting CDBs from a non-human antigen-specific donor antibody onto homologous Old World ape or monkey acceptor frameworks. The Abs have reduced immunogenicity and are better tolerated in humans (because of the close similarity between the human and primate proteins), but retain the full antigen-binding affinity of the donor

Ig heavy chain V region (clone 17s.93) - mouse (fragment)
C;Species: Mus musculus (house mouse)
C;Date: 30-Sep-1993 #sequence_revision 30-Sep-1993 #text_change 16-Aug-1996
C;Accession: PH1010
R;Tillman, D.M.: Jou, N.T.; Hill, R.J.; Marion, T.N.
J. Exp. Med. 176, 761-779, 1992
A;Title: Both IgM and IgG anti-DNA antibodies are the products of clonally selective A;Accession: PH1010
A;Accession: PH1010
   A;Gene: GDB:IGHV@ ...

A;Cross-references: GDB:128528; OMIM:147070

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            80
